SECURITY

of your employees
is a priority,

offer a safer work
environment while
saving time and money

HEAT SEALED CONTOURS

Our unique heat sealing process that replaces traditional seams for the contour of our safety net protection systems greatly increases its resistance to the elements, preventing infiltrations.

A SAFER WORKPLACE

From conception to manufacturing, our safety net protection system gives you peace of mind regarding machine protection as recommended by the CNESST and other safety codes.

Technical informations

- Transparent net that allows you to see the equipment at any time
- UV resistant
- Cold-proof
- Fire retardant
- 22% polyester net covered with 78% PVC
- 22oz yellow vinyl heat sealed contour
- Corrosion resistant eyelets
- Heat sealed contour to prevent water and dirt infiltration in the fold of the fabric

Our protection system is completely versatile and adaptable according to your projects, whether for an existing installation or for a new construction.
